# Lesson 2: Add Three Chords: C, G \& D 

Your Mission: Learn how to finger three more chords and how to switch between all six chords comfortably.

## Notational Shortcut

Okay. We need three bits of information to locate a single note: (1) which String it's on, (2) which Fret to hold and (3) which Finger to use.

Let's do some abbreviating for the string and fret, at least. Instead of giving you a direction such as: "Play the 4th string at the 2nd fret," we'll say, "Play 4:2."

First find the string, then find the fret. We'll still name the finger.

Here's a new chord, C Major, or C, with the same happy Chord Quality as E Major.
But before you try to finger it, look back at the Am. The only difference between $\boldsymbol{A m}$ and $\boldsymbol{C}$ is the placement of the 3rd finger. Start with the Am, keep the 1st and 2nd fingers where they are, then shift the 3rd finger to 5:3, which happens to be the Root Note of the chord, and the preferred bass note. Arch your fingers to avoid muting any strings, press hard to get the fingered strings ringing, and mute or avoid the open 6th string.

Repeat these chord changes until they feel comfortable. You'll need to let your 2nd finger slip up and down the string a bit as you go from the cramped $\boldsymbol{A m}$ to the outstretched $\boldsymbol{C}$.

Let's look at the following chord sequence, where the 2nd finger plays the role of an Anchor finger. We can hold down the very same finger at 4:2, all the way through, adding a lot of stability in switching from Am to $\mathbf{C}$ to $\mathbf{E m}$ back to $\mathbf{A m}$. Repeat this chord progression 3 or 4 times, or until it becomes smooth:

Let's throw another chord into the mix: G Major, or simply $\mathbf{G}$.
Here are two alternate fingerings for $\mathbf{G}$. They both ask you to spread certain adjacent fingers far apart, all the way from the 1st to the 6th string.

The Root Note is at 6:3, so we want to hear the 6th string in the bass:

The first one is easier to play, and more natural to finger, because the stretch between the 2nd and 3rd fingers is not bad. But more often, the second fingering, with the stretch between the 3rd and 4th fingers, is the preferred fingering.

Here's why: We try to reduce how much jumping around we need to do when switching from chord to chord, and the second fingering achieves this more often. Try switching from $\mathbf{C}$ to both of the $\mathbf{G}$ fingerings, and you'll see that your 3rd finger travels less when the split is between the 3rd and 4th fingers (1 versus 4 strings):

## Playtime

Let's practice the $\mathbf{C}$-to-G chord change with the following songs. Again, the symbol for each chord is placed over the word or syllable where a Downstroke should be played. There are two versions of each Starting Note, a low one and a high one. These happen to be the same notes, only an octave apart. That is, they are 8 notes apart (octo $=8$ ) in the "DO-re-mi-fa-sol-la-ti-DO" scale (known as the Major Scale [more later]).

Play either a Downstroke or a Down-Up combination for each occurence of a $\mathbf{C}$ or $\mathbf{G}$ chord. Play each tune twice and repeat from the top until comfortable.

$\mathbf{C}^{4 \mathrm{x}} \quad \mathbf{C} \quad \mathbf{C} \quad \mathbf{C} \quad \mathbf{G}^{2 \mathrm{x}} \quad \mathbf{G} \quad \mathbf{C}$

Camptown racetrack five miles long, oh, the doo-dah day

|  | $C^{3 \mathrm{x}}$ c |  | $G^{6 x}{ }_{G}$ | G |  |  |  |  | G |  | G |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Birth - day | to | you, |  | Нарp | oy |  |  |  |  | to |  |  |

3:0 or 1:3
$\mathbf{C}^{2 \mathrm{x}} \quad \mathbf{C} \quad \mathbf{G}^{2 \mathrm{x}} \mathbf{G} \quad \mathbf{C}^{2 \mathrm{x}} \quad \mathbf{C} \quad \mathbf{G}$
Take me out to the ball-game, take me out with the crowd
5:3 or 2:1

Next up is the D Major chord. The D chord shows up almost as often as the $\mathbf{G}$ chord, so it's another heavyweight.

## D Major

Here's the fingering that most players favor. Place the 1 st finger at 3:2, the 2 nd finger at $\mathbf{1 : 2}$ and the 3rd finger at 2:3 to form this triangle:

Placing the 3rd finger might give you some trouble. It needs to reach past the other two, more dominant fingers, and take extra care to come straight down onto the 2 nd string. Stand up tall to avoid
 touching and muting the 1 st string.

Do not let the 6th string ring open. Not only is it not the Root Note, but it doesn't even belong to the $\mathbf{D}$ chord. In fact, it is the open 4th string that bears the lowest-pitched D Root Note, so that's really the note we want to hear in the bass. And the 5th string? It does belong to the $\mathbf{D}$ chord, but it's not the preferred bass.

Now we'll play the same two songs but this time in a different KEY, and we'll start discussing keys in the next lesson. For now, just observe the new Starting Notes and practice the chord changes between the $\mathbf{G}$ and $\mathbf{D}$ chords.
Try both forms of the $\mathbf{G}$ chord and try to decide which route you prefer.
Play each tune twice and repeat from the top until comfortable.
$\mathbf{G}^{4 \mathrm{X}} \quad \mathbf{G} \quad \mathbf{G} \quad \mathbf{G} \quad \mathbf{D}^{4 \mathrm{x}} \quad \mathbf{D} \quad \mathbf{D} \quad \mathbf{D} \quad$ Starting Notes: Camptown ladies sing this song, doo-dah, doo-dah
$\begin{array}{lllllll}\mathbf{G}^{4 \mathrm{X}} & \mathrm{G} & \mathbf{G} & \mathbf{G} & \mathbf{D}^{2 \mathrm{X}} & \mathbf{D} & \mathbf{G}\end{array}$ Camptown racetrack five miles long, oh, the doo-dah day
$\begin{array}{llllllllllll}\mathbf{G}^{3 \mathrm{x}} & \mathbf{G} & \mathbf{G} & \mathbf{D}^{6 \mathrm{x}} & \mathbf{D} & \mathbf{D} & \mathbf{D} & \mathbf{D} & \mathbf{D} & \mathbf{G}\end{array}$
Happy Birth-day to you, Happy birth-day to you
$\mathbf{G}^{2 \mathrm{X}} \quad \mathbf{G} \quad \mathbf{D}^{2 \mathrm{X}} \quad \mathbf{D} \quad \mathbf{G}^{2 \mathrm{X}} \quad \mathbf{G} \quad \mathbf{D}$
Take me out to the ball - game, take me out with the crowd
4:0 or $\mathbf{2 : 3}$

6:3 or 3:0
